

MetalCrete™

GENUINE METAL FINISHES ON CONCRETE

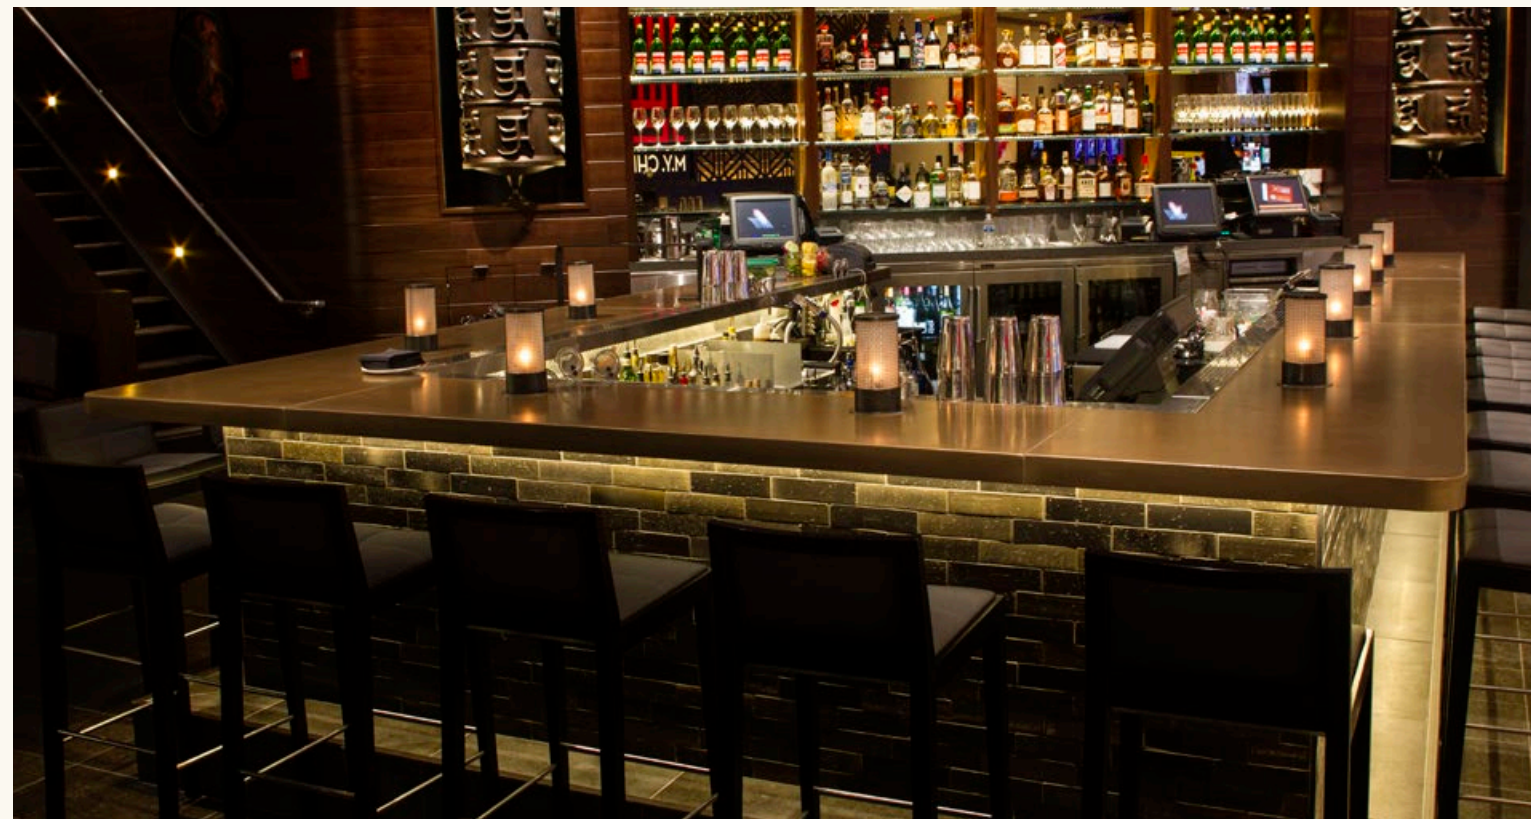

The MetalCrete® process allows for an entire fixture to be covered by a genuine soft- metal finish or for metal accents to be strategically applied. Even our concrete soaking tubs can have a MetalCrete® surface on the exterior.

MY CHINA RESTAURANT / BRONZE METALCRETE®

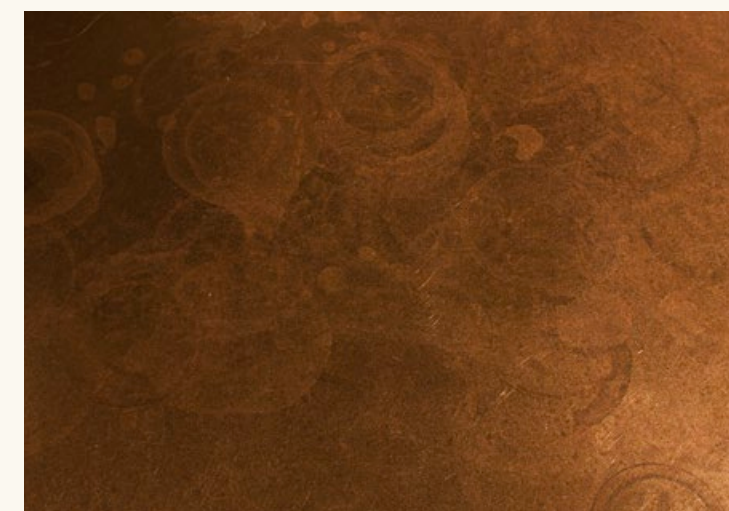

Real Metal Finishes On Solid Concrete

GENUINE COPPER, IRON, BRONZE, AND PEWTER

Unlike sealed concrete or our stain-free NuCrete® concrete, MetalCrete® is a living finish that will wear its age proudly. A typical MetalCrete® countertop will begin with a clear, polished look, but these are genuine soft metals. As such, they will scuff and scratch. Less so with wall cladding, but expect your MetalCrete® sinks and countertops to gradually take-on the worn and weathered character of an old-world country tavern or perhaps an antique painting.

MetalCrete® is not for everyone or every purpose, but if you enjoy a genuine, soft-metal finish that displays an ever-evolving patina of wear, you will love MetalCrete®. The appearance will be truly unique to your fixture.

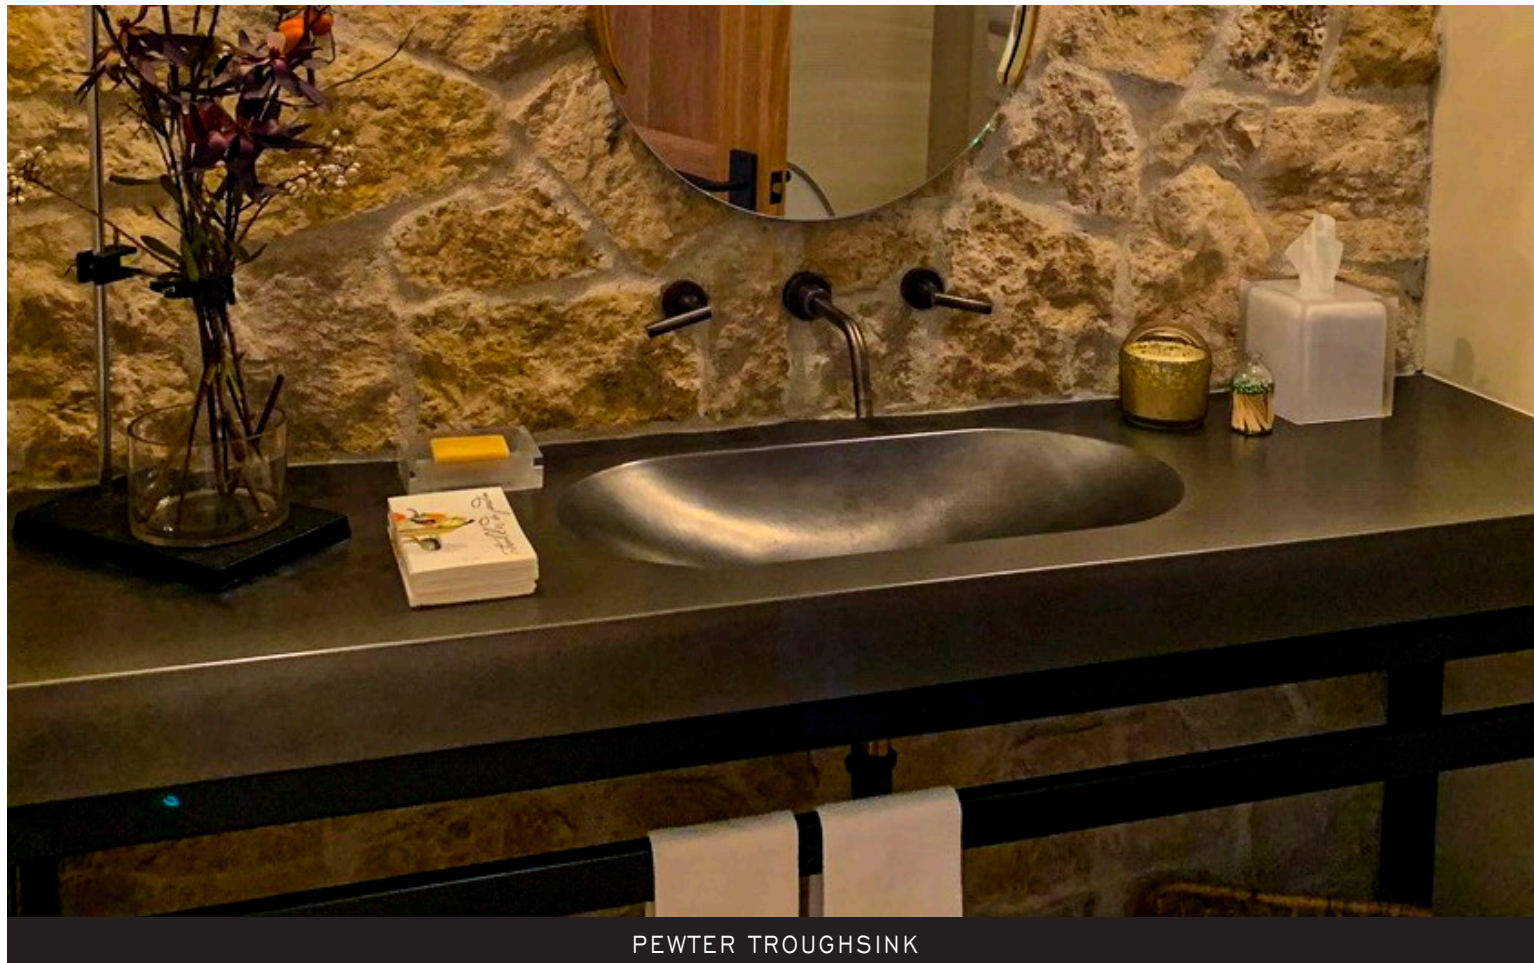

Only from Sonoma Cast Stone.

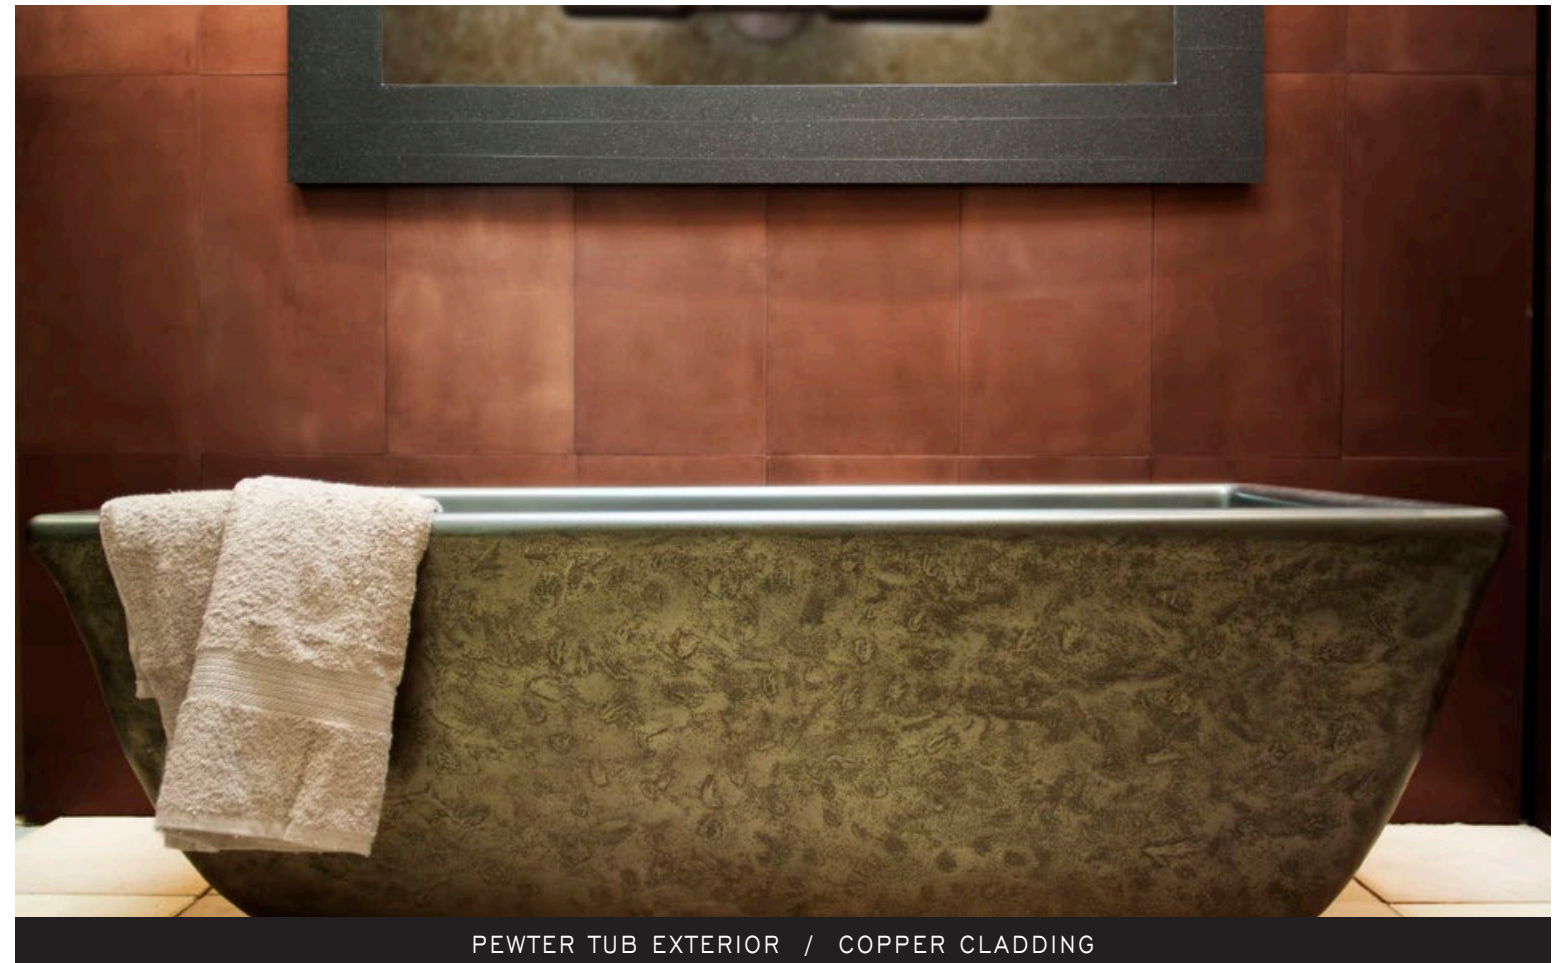

MetalCrete® is a living finish of genuine soft-metal that wears its age proudly with an ever-growing patina of wear.
